

Sunell Onvif Configuration Help Guide. (Onvif 1.02spec)

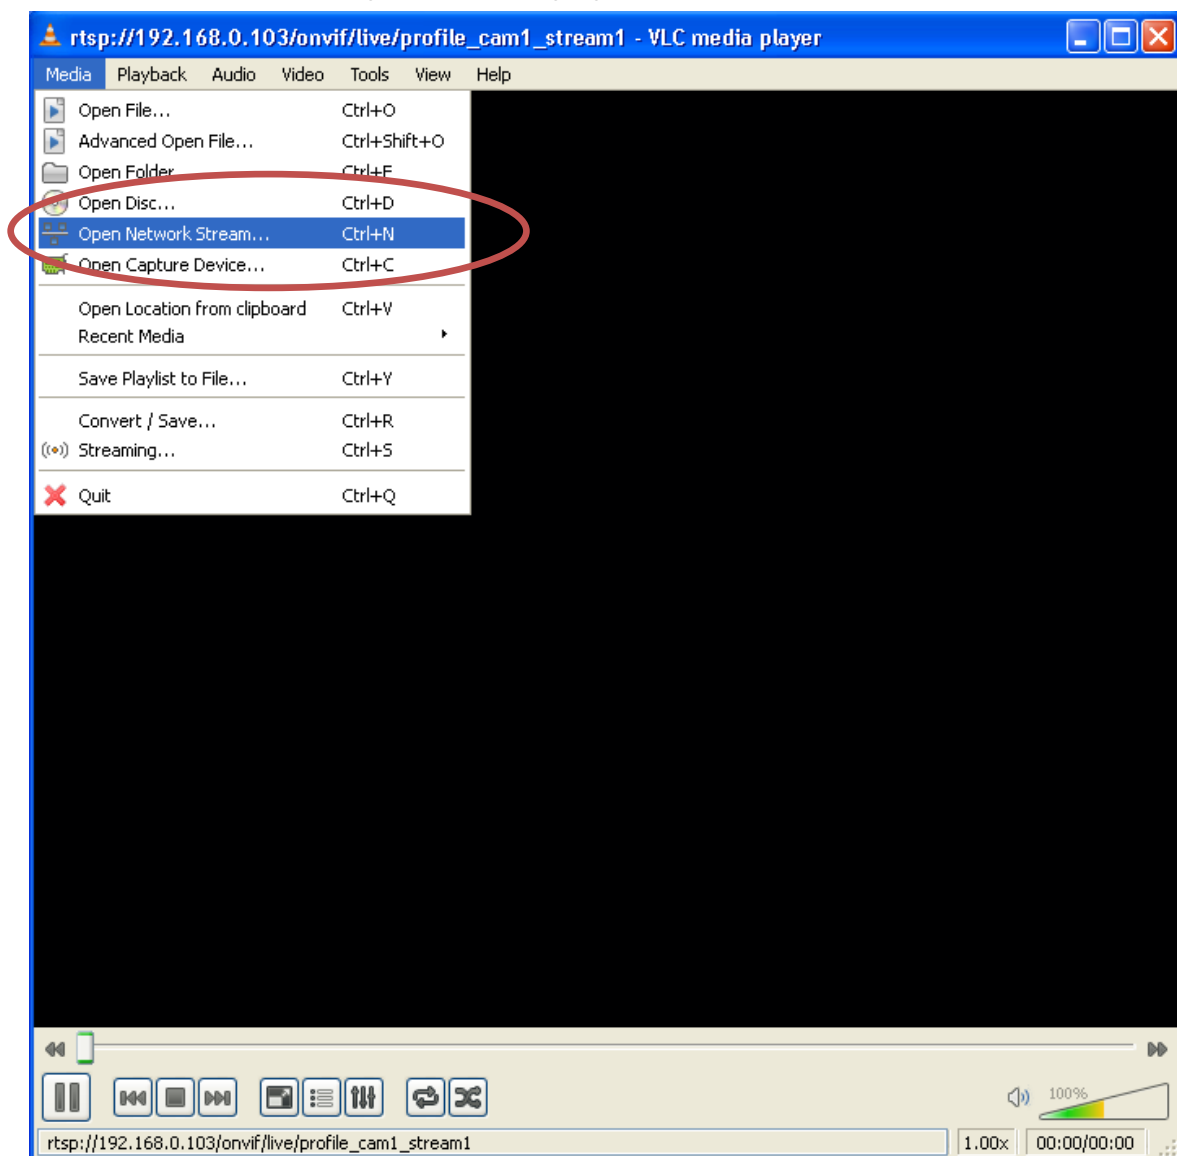

Builds from 44029 and greater.

VLC Player RTSP Streaming

1. VLC player is a free popular video player highly recommended, it supports native playback of all Sunell recorded files from IP products including mega pixel recordings with extension of .ts

For free download you can visit www.videolan.org product is suitable for both PC Mac and several other formats including Linux variations.

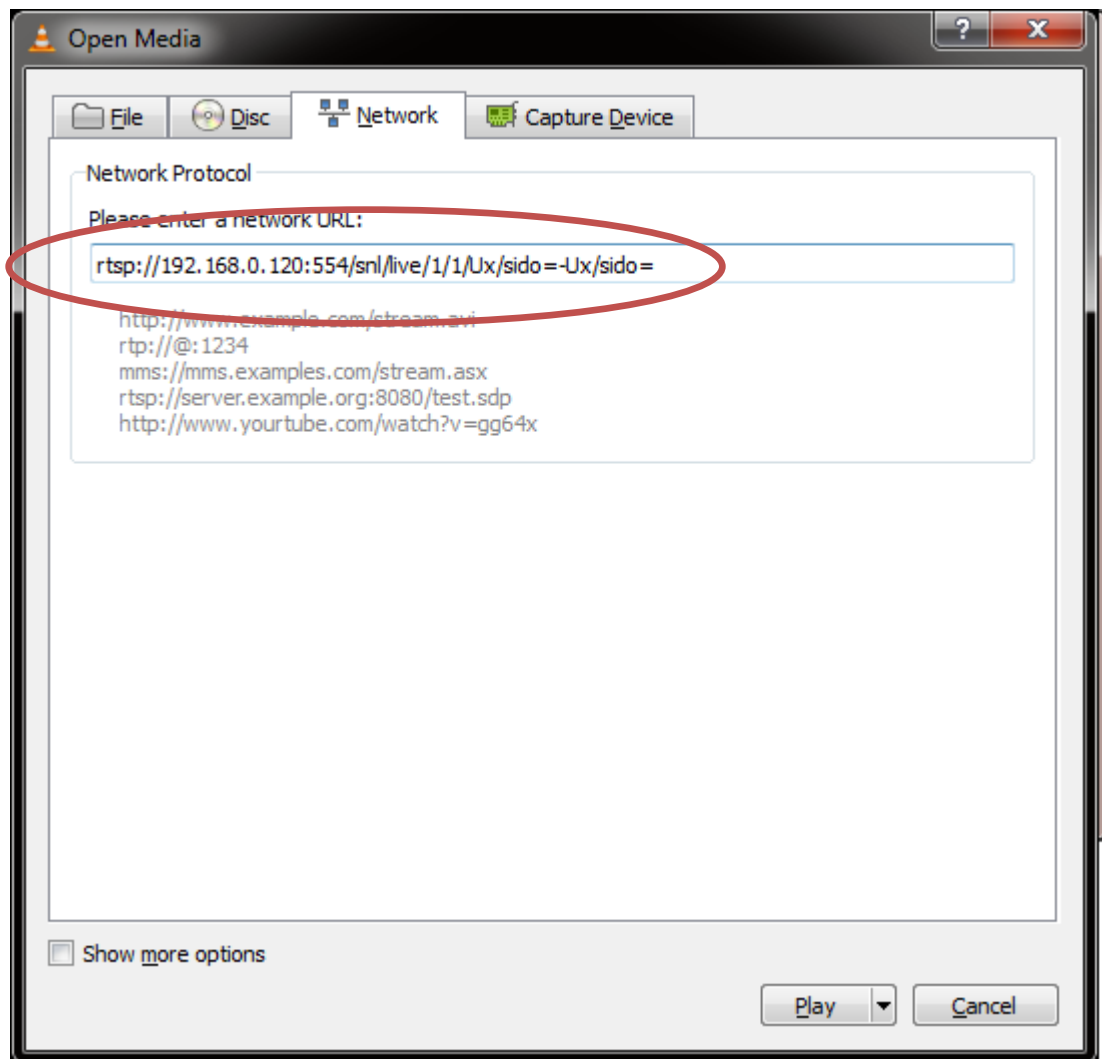

Below is the main screen. (English version language shown)

2. Select the Open Network Stream. Or use the shortcut Ctrl+N

You will be presented with the below information which you use the following details as shown

You notice I have the *Show more options* enabled just to show there is no other settings needed.

Using the RTSP Tool you can copy and paste the information into this line to enable VLC player to start to stream information.

RTSP Tool is on website to download of supplied as part of the toolpackage with camera CD.
